# UK Road Safety — Key Findings, 2021–2025

## Scale

493,271 traffic accidents and 544,283 casualties **over five years**. **5,717 fatalities**, 104,095 serious injuries, 109,812 killed or seriously injured (KSI)

## Volume vs. severity

There are 66,233 casualties in the poorest IMD decile and 34,750 in the wealthiest.

**The volume differs by a factor of 1.9**, yet the KSI% remains virtually unchanged (19–21.5%).

The issue lies not in the severity of the accidents, but in their frequency.

## Motorcyclists

37,801 casualties were motorcyclists (7% of all casualties). However, their **KSI rate was 32.12%**—almost 1.6 times the average (20.18%).  
~12,000 people were killed or seriously injured over five years.

## Age

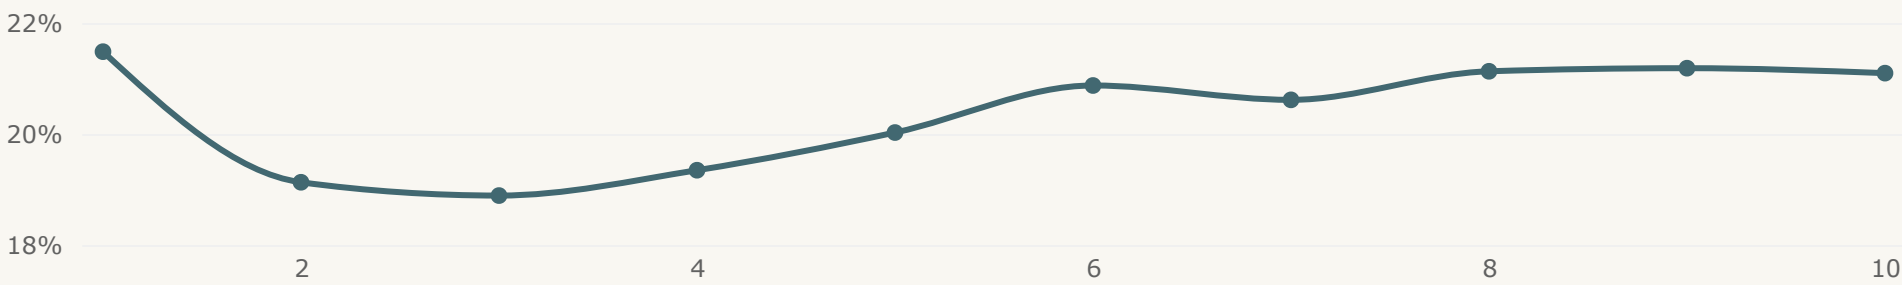

The KSI% increases towards the ends of the age scale: **16.9% for the 0–15 age group** and **36.2% for the 75+ group**.  
KSI% increases towards the edges — 16.9% for 0–15 and 36.2% for 75+

## Trends

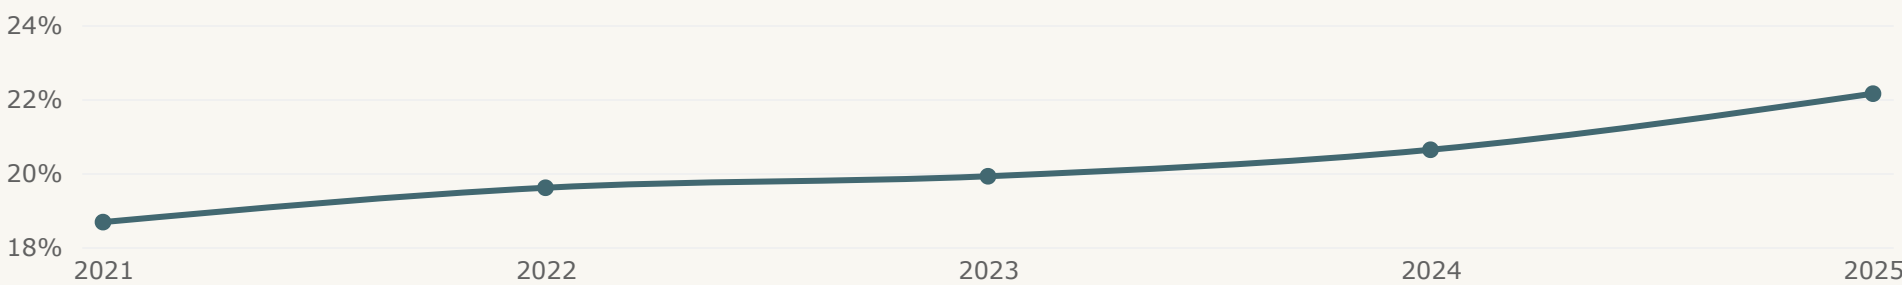

Between 2021 and 2025, the number of **traffic accidents remained stable**, but the share of **severe accidents** rose from 18.5% to **22.4%**.

Causes: an increase in speeding violations, an aging population, and the motorcycle season.
